• ABOUT ME

Passionate about software development and decentralized systems, I believe in technology as a tool to solve real people's problems.

Experienced in delivering high scale web2 projects, I'm looking to break into the web3 industry through development, building personal projects, and attending hackathons.

• TECH STACK

- **Frontend Engineering:** Next.js, React.js, Redux for state management, Ethers.js, Web3.js, Wallet Connect, Wagmi Hooks, Rainbowkit.
- **Layout building:** SASS, Styled Components, TailwindCSS, PostCSS, Material UI, NextUI, Framer Motion.
- **Smart Contracts Engineering:** Solidity, Remix, Hardhat, Hardhat plugins, Chai as testing library, IPFS, Chainlink products, Alchemy.
- **Software Engineering tools and workflow:** Git, GitHub, BitBucket, Jira, Agile Methodologies, Scrum, Kanban, Notion, Figma.

• EDUCATION

Universidad Nacional de Mar del Plata Software Engineering Degree

Engineering degree with a strong focus on computer science and software architecture.

2020 - PRESENT

Universidad Nacional de Mar del Plata Industrial Engineering Degree

Engineering degree with an emphasis on processes efficiency, productivity, resources optimization and business management.

2018 - 2020

• WORK EXPERIENCE

Frontend developer

Valtech, 2021 - PRESENT

- Valtech is a +4000 employees software company originally from France, which helps companies to do their digital transformation.
- I'm working on a large payment and billing management system for a pharmacy association (used by more than 500 pharmacies), which is now live in production after a full year of development.
- My frontend skills highly improved, and I learned how to manage code in a large-scale project, working mainly with Next.js, Redux, and Styled Components.

Full-stack developer

Freelance, 2020 - 2021

- I made full-stack websites for small clients, mostly with React.js, Sass, and Firebase. I also made all the necessary API integrations.

Math & Physics teacher

Freelance, Ene 2018 - 2020

- I gave personal Math, Algebra, and Physics classes to prepare students for their application and first years of University.

• SIGNIFICATIVE EXPERIENCES

Won an Alchemy Hackaton

Back in June of 2022, we won an Alchemy hackathon with another two devs, the topic was Governance and I made the UI + interaction with the Smart Contracts + part of the Smart Contracts.

Etherem Developer Program

I was selected along with another 200 devs to study Solidity & web3 full-stack development with Platzi and the Ethereum Foundation, where we got private lessons, workshops and coding challenges.

Ethereum Foundation Scholarship

Currently, I'm in the last round of interviews with the Ethereum Foundation to be fully granted to attend ETH Bogotá and the Devcon week.

Granted to attend Ethereum Río

Back in March of 2022, I was selected for a full PadawanDAO grant to attend and participate in the event, where I learned a ton about the Ethereum ecosystem and I started my Solidity career.

• MOST INFLUENT COURSES & CERTIFICATIONS

Defy Education - Pablo Sabatella

10 weeks training on decentralized finances and crypto ecosystem, we discussed multiple blockchains, tokenomics, protocols, scalability, security, decentralization and adoption.

FreeCodeCamp

Where I got most of my technical knowledge. I have taken several FreeCodeCamp courses on front-end and full-stack web development. I'm currently taking Patrick Collins's Blockchain with JS course.

Harvard CS50

The course that I enjoyed the most. I deeply learned and practiced Computer Science fundamentals, programming & problem solving.

Platzi

Taking advantage of my Platzi scholarship with the Ethereum Developer Program, I have used their platform to take advanced react, front-end and solidity extra-courses.
